PROFILE SUMMARY

- Salesforce Developer with hands-on experience building and customizing applications on Sales Cloud and Service Cloud using Apex, LWC, and Flow Builder.
- Proficient in designing custom objects, page layouts, reports, dashboards, and automation workflows; skilled in Salesforce security model including Profiles, Roles, and Permission Sets.
- Experienced in writing Apex classes, triggers, SOQL/SOSL queries, Asynchronous Apex, and developing Lightning Web Components (LWC) for dynamic UI solutions.
- Hands-on with Salesforce REST/SOAP API integrations, Named Credentials, OAuth 2.0 flows, and data migration using Data Loader and Workbench.
- Certified Salesforce Administrator and AI Associate; actively seeking a Salesforce Developer role to contribute to scalable CRM solutions in a growth-oriented environment.

TECHNICAL SKILLS

Salesforce Platform: Apex, SOQL, SOSL, Triggers, Asynchronous Apex, Flow Builder, LWC, Visualforce Pages

Integration: REST API, SOAP API, Named Credentials, OAuth 2.0, External Credentials

Salesforce Clouds: Sales Cloud, Service Cloud

Administration: Profiles, Roles, Permission Sets, Sharing Rules, Validation Rules, Data Loader, Workbench

Web Technologies: HTML, CSS, JavaScript, Lightning Design System (SLDS)

Tools & IDE: Visual Studio Code, GitHub, Salesforce CLI, Workbench, Data Loader

PROJECTS

1. Meal Search App (LWC)

- Built a modular 'Meal Hunt' web app using LWC with 4 components (parent + search, results, tiles) integrated via @api decorators and Custom Events, reducing component coupling by separating concerns.
- Integrated TheMealDB REST API using JavaScript Fetch API with async/await, enabling real-time meal search and recipe display for 100+ guest users on Salesforce Digital Experience (LWR template).
- Designed a fully responsive UI using SLDS and custom CSS; implemented a custom modal popup for detailed recipe views, improving user engagement flow.
- Configured CORS, Trusted URLs, and Remote Site Settings to securely enable external API calls; deployed to Experience Cloud as a guest-accessible app without Salesforce login.

2. Spotify Integration (OAuth 2.0 & LWC)

- Integrated Salesforce with Spotify Web API using OAuth 2.0 Authorization Code Flow; configured Authentication Provider (OpenID Connect) and Connected App to achieve secure token-based access.
- Implemented Named Credentials and External Credentials to manage API endpoints and tokens, eliminating hardcoded secrets and improving security posture.
- Developed Apex REST callout services with HTTP/HttpRequest, JSON parsing, and URL encoding (EncodingUtil.urlEncode) to handle structured music search responses from Spotify's API.
- Built a responsive LWC with imperative Apex calls and asynchronous JavaScript; applied custom CSS aligned with Spotify branding, reducing UI inconsistency across track search results.

CERTIFICATIONS

- Salesforce Certified Administrator — [Trailhead Profile](#)
- Salesforce AI Associate — [Trailhead Profile](#)

EDUCATION

Bachelor of Engineering in Computer Science

SSBT College of Engineering and Technology, North Maharashtra University

Graduated: August 2022 | CGPA: 7.58 / 10

NON-TECHNICAL SKILLS

Documentation, Team Collaboration, Communication, Critical Thinking, Problem Solving, Interpersonal Skills
